VÁCLAV BLAŽEK

ON CLASSIFICATION OF MIDDLE IRANIAN LANGUAGES (PRELIMINARY REPORT)

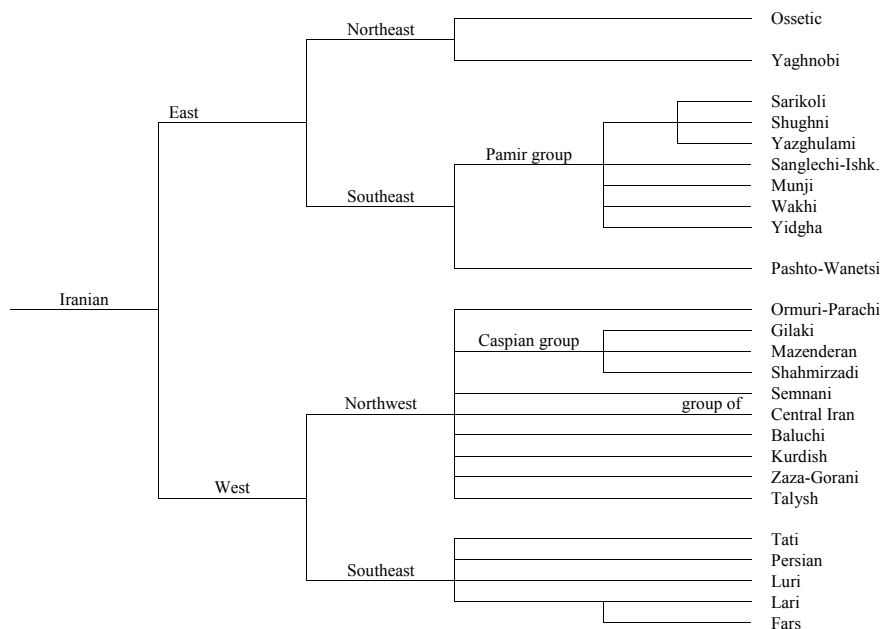

Abstract

In the article the first attempt to classify the Middle Iranian languages, applying so-called ‘recalibrated glottochronology’, is presented in wider context of questions of genetic classification of Iranian languages. The results confirm the conclusions obtained in quantitative models of classification of modern Iranian languages, namely the western vs. eastern dichotomy is not valid.

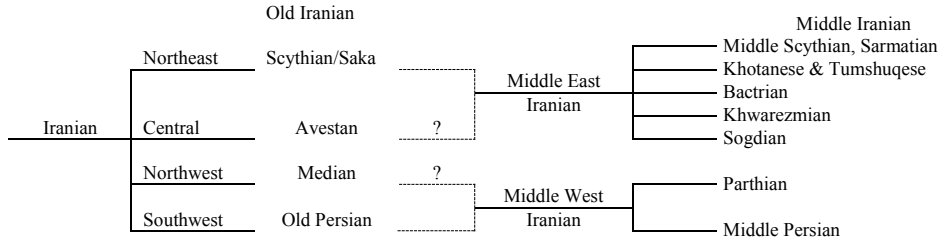

Keywords

Iranian languages, genetic classification, qualitative model, quantitative model, recalibrated glottochronology.

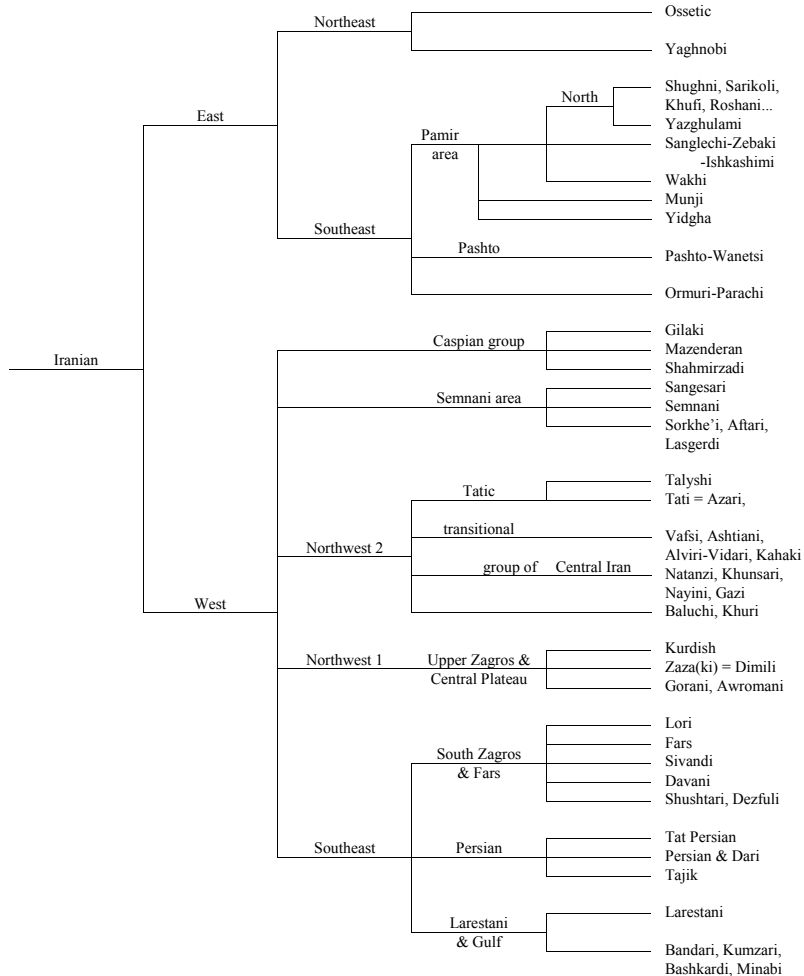

1. The modern Iranian languages have been traditionally classified into west and east branches, both with north and south subbranches (see e.g. Ethnologue):

2. This arrangement is in principle kept even in the most recent compendium on the Iranian languages (Windfuhr 2010, 12–15), where three sequential models of classifications for old, middle and modern stages of development of the Iranian languages are offered:

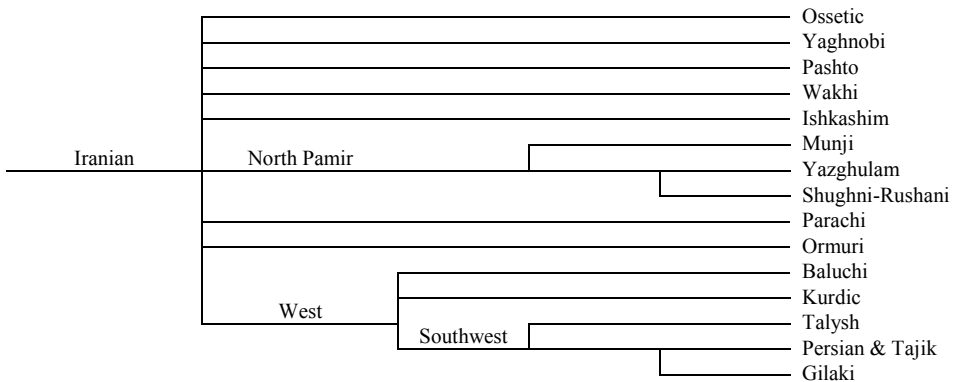

Classification of the New Iranian languages (Windfuhr 2010, 12–15)

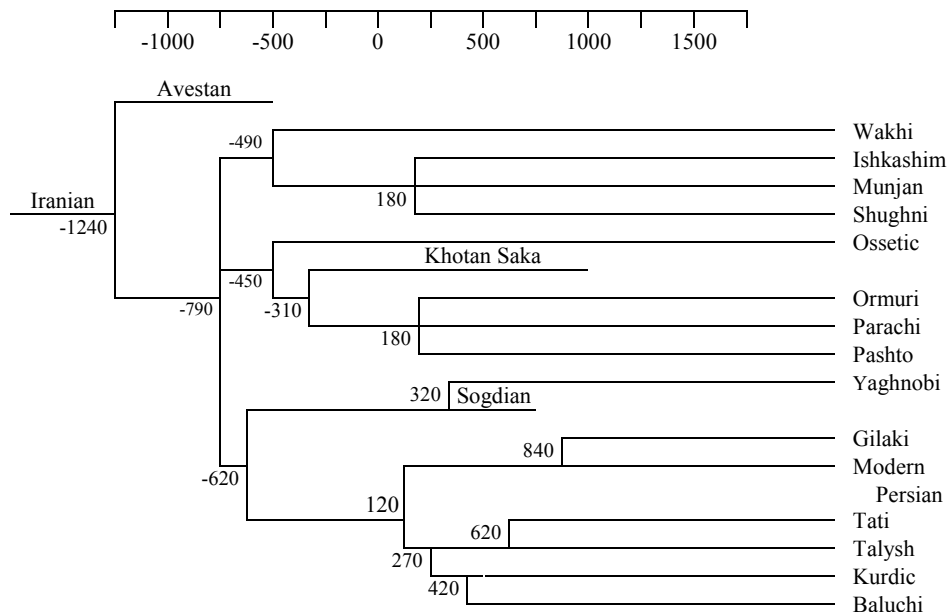

The attractive question of followers of the Middle Iranian languages among the modern languages is not answered unambiguously. It seems, Modern Persian is safely a continuant of Middle Persian (Skjærvø 2010, 196). Less secure is an analogous role of Baluchi as a follower of Parthian (Korn 2005, 323–330 prefers a transitional position between North- and Southwest Iranian), Yaghnobi as a follower of Sogdian (cf. Yoshida 2010, 327 about differences) or Wakhi as a follower of Khotanese & Tumshuqese Saka. Quite hypothetical is a similar relation between Sangesari and Khwarezmian (Windfuhr 2010, 15).

3. Traditional models of classification of the Iranian languages are based on qualitative observation of common features in phonology and morphology, combined with geographical distribution of languages. If the quantitative approach based on lexicostatistics is applied, the results are different. First of all, the west vs. east dichotomy must be abandoned. In all quantitative models the so-called western branch is apparently younger than eastern one, and its existence is doubtful at all. According to Jaxontov (2006) operating with the lexical data summarized in pioneering works of Sokolova (1967, 1973), the western branch was one of several coordinate branches:

4. The first attempt to classify the Iranian languages, applying recalibrated glottochronology, was realized by the team of Sergei Starostin (2004). Important is that Avestan and two Middle Iranian languages, Sogdian and Khotan Saka, were included.

5. Preliminary statistics of results of the present glottochronological comparison of five well-described Middle Iranian languages:

5.1. Missing items and loans:

Middle Persian: Ø

Parthian: 2, 3, 11, 13, 24, 26, 27, 41, 48, 50, 66, 69, 75, 100; Σ 14.

Sogdian: 13, 41, 48, 70; Σ 4.

Khwarezmian: 48, 64, 68, 79; Σ 4.

Khotanese: 7, 30, 83; Σ 3.

Bactrian: 2, 3, 4, 6, 7, 8, 9, 10, 12, 13, 14, 15, 20, 21, 24, 25, 26, 27, 29, 30, 31, 35, 36, 37, 38, 40, 41, 43, 46, 47, 48, 49, 50, 53, 56, 61, 64, 65, 66, 68, 69, 70, 74, 75, 76, 78, 79, 80, 83, 84, 88, 89, 90, 93, 96, 97, 100; Σ 57.

5.2. Survey of mutual non-cognates $\{(a-b)/a\}$, where a = number of attested items of the same meaning, b = number of non-cognates:

Middle Persian vs. Parthian: 42, 56, 61; share of cognates: $83/86 = 96.51\%$.

Middle Persian vs. Sogdian: 4, 7, 18, 24, 29, 42, 43, 49, 49, 56, 61, 68, 71, ?77, 78, 99; share of cognates: $82/96 = 85.41\%$.

Middle Persian vs. Khwarezmian: 2, 3, 4, 7, 11, 12, 18, 19, 26, 29, 30, 32, 33, 35, 36, 42, 45, 46, 49, 52, 53, 56, 61, 66, 71, 73, 77, 83, 89, 92, 99; share of cognates: $65/96 = 67.91\%$.

Middle Persian vs. Khotanese: 3, 5, 8, 11, 28, 29, 32/2, 34, 36, 38, 42, 61, 64, 66, 68, 69/2, 78/2, 82, 85, 99; share of cognates: $78.5/97 = 80.93\%$.

Parthian vs. Sogdian: 4, 7, 18, 19, 22/2, 29, 33, 34/2, 52, 58, 71, 78, 99; share of cognates: $73/85 = 85.88\%$.

Parthian vs. Khwarezmian: 4, 7, 12, 18, 19, 29, 30, 32, 33, 35, 36, 45, 47, 49, 52, 53, 56, 58, 73, 77, 82, 83, 85, 86, 89, 92, 99; share of cognates: $56/83 = 67.47\%$.

Parthian vs. Khotanese: 4, 5, 8, 12, 28, 29, 33, 34, 35, 36, 38, 52, 56, 71, 73, 78/2, 82, 85, 99; share of cognates: $64.5/83 = 77.71\%$.

Sogdian vs. Khwarezmian: 2, 4, 5, 7, 11, 12, 19, 22/2, 24, 32, 35, 43, 45, 46, 52, 53, 56, 66, 67, 71, 77, 78, 85, 89, 99; share of cognates: $68.5/93 = 73.66\%$.

Sogdian vs. Khotanese: 4, 5, 8, 11, 22/2, 24, 28, 35, 38, 43, 64, 66, 67, 69/2, 71, 78, 82, 85, 86; share of cognates: $74/93 = 79.57\%$.

Khwarezmian vs. Khotanese: 2, 3, 8, 11, 12, 18, 26, 28, 32, 34, 35, 38, 45, 52, 53, 56, 69/2, 71, 73, 78/2, 82, 85, 86, 89, 92, 99; share of cognates: $68/93 = 73.18\%$.¹

5.3. *Mutual percentages of common cognates between five well-documented Middle Iranian languages:*

%	Parthian	Sogdian	Khwarezmian	Khotanese
Middle Persian	83/86 = 96.51	82/96 = 85.41	65/96 = 67.91	78,5/97 = 80.93
Parthian		72/85 = 85.88	56/83 = 67.47	64.5/83 = 77.71
Sogdian			68.5/93 = 73.66	74.0/93 = 79.57
Khwarezmian				68.0/93 = 73.18

5.4. *Chronology of epigraphic or literary documents of studied languages:*

Middle Persian: 3rd - 7st cent. & 9st - 10st cent. CE; mid: 600 CE (Sundermann 1989a, 138–39).

Parthian: 2nd cent. BCE - 3rd cent. CE (Arsakids) & 3rd - 4 st cent. CE (Sassanids); mid: 100 CE (Sundermann 1989b, 116).

Sogdian: 4st - 10st cent. CE; mid: 600 CE (Yoshida 2010, 280–81).

Khwarezmian: 11st - 14st cent. CE; mid: 1200 CE (Durkin-Meisterernst 2010, 336–38).

Khotanese: 7st - 10st cent. CE; mid: 800 CE (Emmerick 2010, 378).

Bactrian: 2nd - 3rd cent. CE; mid: 200 CE (Sims-Williams 1989, 231).

5.5. *Results of the glottochronological analysis:*

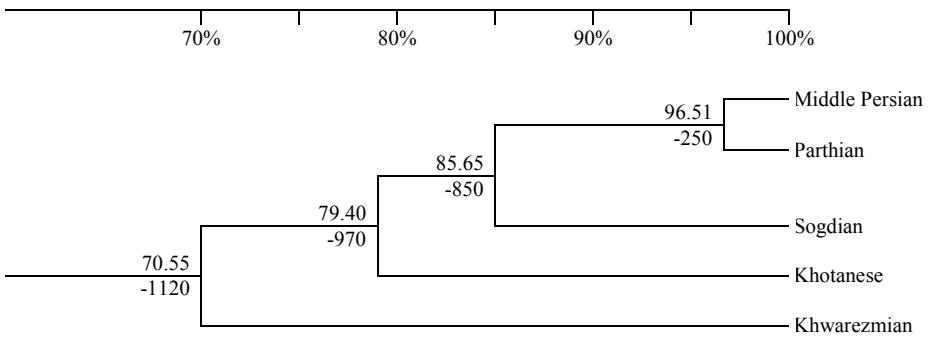

In the case of asynchronously attested languages it is necessary to modify the calculations of partial disintegrations. Morris Swadesh offered a virtual chronological level, determinable as an arithmetical average of the chronological levels of the compared languages. this easy correction gives the following virtual chronological levels:

Middle Persian & Parthian: $(200 + 600)/2 = 350$ CE, minus 600 years of divergence = 250 BCE.

{Middle Persian & Parthian} & Sogdian: $(350 + 600)/2 = 475$ (480^{round off}) CE, minus 1330 years of divergence = 850 BCE.

{Middle Persian & Parthian & Sogdian} & Khotanese: $(480+800)/2 = 640$ CE, minus 1610 years of divergence = 970 BCE.

{Middle Persian & Parthian & Sogdian & Khotanese} & Khwarezmian: $(640 + 1200)/2 = 920$ CE, minus 2040 years of divergence = 1120 BCE.

¹ In Bactrian the number of identified lexical units of the test 100-word-list is too small (43) to apply the standard procedure.
